BONE HEALTH RESEARCH

Bone health is fundamental to having an active and productive lifestyle. Most of us do not know the status of our bone health until problems arise.

Osteoporosis is a bone disorder that effects millions of Americans every year. It's not just a women's disorder.

We are looking for Orange County resident men and women aged 16 years or older, of all ethnicities to participate in the study.

Qualified subjects will receive a **FREE** bone scan, blood analysis, nutritional survey and consultation. *A \$1000.00 value for free.* Participation in this study is a great way for you gain awareness about your personal bone health and overall nutritional status.
